

LAURE MILIAN

Fullstack Engineer

✉ laure.milian.cv@gmail.com

📍 Toulouse, France

🎂 33 years old

I have **5 years of experience as a fullstack engineer**.

I had the opportunity to **contribute to more than 50 projects** (web and mobile applications).

I am particularly interested by the **front-end** part of development and would like to work with Vue.js, React or Angular.

I am available for **immediate employment** (or before July 2024), as a **remote worker** (or 2 days/week on site at Toulouse).

WORK EXPERIENCES

Web and mobile developer

[Bleu122](#) | 2017 - 2022 (5 ans et 4 mois)

Bleu122 **creates web and mobile applications from scratch**. I joined the company as an intern. Following this internship I've been hired as a web and mobile developer, then as **lead web developer**.

I had the opportunity to work on **more than 50 projects** for various types of companies (veterinary clinic, aeronautics, podcasts publisher...)

I have been involved at all levels of the life cycle of an IT project, from the first meeting with a new client to publishing the application online or on applications stores.

I had the chance to see the company grow from 4 to 17 employees. I helped support this growth and organize the team as a member of the **management committee**.

Some projects I worked on:

- **Pica** - Grails / jQuery
Web application to manage collisions between planes and animals for French Civil Aviation Authority.
- **Pricelnsight** - Grails / jQuery
Web application to collect and analyse prices from concurrence for TotalEnergies.
- **Omitzuka** - Grails / Vue.js
Mobile application to bet (for free) on sports with friends.

Webmarketing and project management

[Ctoutvert](#) | 2015 - 2016 (1 an et 2 mois)

Ctoutvert is a company offering **e-commerce solutions for tourism**, including a software for online reservation used by numerous campsites across Europe.

I worked on different subjects: project management, SEO, SEA (Adwords), social networks, newsletters...

I worked with a team of approximately 20 developers and this collaboration that made me want to become one myself!

CERTIFICATIONS

Build a Modern Computer from First Principles: Nand to Tetris

[Coursera \(HUJI\)](#) | 2023

The intent of this course is to **build a fully functional computer** (to play Tetris on!).

My motivation for taking this class was to **gain a deeper understanding of all the layers that constitute a modern computer**.

Before taking this course I developed programs running on a magic and mysterious box. Now it's still magic but not that mysterious anymore 😊
